

The BEKON group constructs at home and abroad dry fermentation plants to produce biogas and electricity from organic waste.

Due to the fast-growing domestic and international market, we are looking for a

Process engineer in the field of biogas (w/m)

Your tasks:

- Conceptual planning for new installations
- Creating procedural process flows
- Contact to project managers, other technical departments, authorities and inspection agencies for process related issues
- Support the creation of P&IDs (biogas, ventilation, percolation, heating, CHP, etc.)
- Assisting in the preparation of risk analyzes and plant manuals and process descriptions, etc.
- Participation in regulatory approvals
- Conceptual planning of upgrades to existing installations in consultation with the Service Department

Your qualifications:

- Study of mechanical engineering, chemical engineering, environmental engineering or similar qualification
- At least 2 years experience, ideally with experience in the industry
- Knowledge of "Autocad" and / or "Eplan" and California programs desirable
- Knowledge in the field "Machine Directives"
- Analytical, structured way of thinking
- Willingness to travel, resilience and teamwork skills
- Fluent english

You can expect:

- An entrepreneurial function in a dynamic environment
- National and international projects with professional customers
- An attractive business within a motivated team

We look forward to meeting you!
